

Container Desiccant Bags Cargo Guard, Cargo Care

Moisture damage

For many years, thousands of containerized cargoes are damaged by moisture problems. When the containers arrive in the destination, metal is found to be rusty or oxidated, cartons become soft and moldy, bulk coffee, cocoa, beans may be damp, musty..., such loss sometimes costs several million dollars. It is caused by two main reasons: **Container Rain** and **Cargo Sweat**.

Container moisture solution

For containerized cargo damp problems, we provide a solution, **TOP-SORB** series container desiccants, which create a dry environment in the container. It can effectively adsorb humidity, and control "dew point" temperature below the actual temperature, and thus prevent mildew, rust formation.

**Cargo Guard -2000
(with hook)**

**Cargo Guard -1000
(with hook)**

Cargo Guard -1000

Cargo Care -500

Specifications

Cargo-Guard: 2000g, 1000g, with hook, can be hung on the hoop, mainly prevent "Container Rain".

Absorbent: active mineral; Adsorption capacity: 50% at 80%RH, 25°C

Cargo-Care: 500g, can be placed freely inside the pallets, between the cargo,

or on the container floor, mainly prevent pallet mould and floor condensation

Absorbent: active mineral; Adsorption capacity: 50% at 80%RH, 25°C

Package Material

Cargo-Guard: Tyvek, laminated non-woven

Cargo-Care: Textured paper

All of them have excellent air permeability and anti-leakage performance.
